---

Automation Tester with 3+ years of experience managing automation projects & software testing throughout the testing phase. Proven expertise in ensuring software performance & reliability by conducting quality assurance & automated testing, including implementation of test plans, bug tracking & software test case development & execution. Currently looking for a new career opportunity to work in progressive and challenging environment with an innovative company.

## SKILLS:

- Proficiency in Java, Selenium, web driver with strong experience in design and testing of the system.
- Good knowledge of C#, Cypress, Python, Typescript, Maven, Java script, Jira-X-Ray.
- Excellent appreciation of test automation cost vs. benefits and analysis ROI.
- Strong experience in CI/CD, JIRA, Agile, Scrum, Jenkins, Git.
- Automation test Engineering methodologies and software including Agile and QTP.
- Strong Banking domain knowledge and propose test plan for testing scenarios of project.

## WORK EXPERIENCE:

### Senior Automation Tester

Wipro Limited, London, United Kingdom, 2020 - Present

- Analyzed and understood existing automation frameworks and upgraded/created new reusable test frameworks using Java, Cucumber, Web Driver, Cypress and Selenium.
- Carried out functional and regression testing.
- Partnered with business and technology to enhance automated testing capabilities.
- Reviewed and evaluated manual user acceptance tests and worked across teams to provide automated solutions.
- Work directly with client to establish project scope, interaction guidelines and project timelines. Managed teams of QA engineers

## PROJECT:

Lloyds Banking Group, London, UK, 2020 - Present

Roles and Responsibilities:

- Facilitated scalability, process definition, reusability, and maintenance by developing & implementing a Selenium / Web driver test automation Framework leading to an overall reduction in cost.
- Experience in developing automated application test scripts with industry tools, including tools such as Selenium, Cypress or functional tester. Extending, improving and maintaining existing test framework.
- Analyzing test results and submitting corresponding defects / tasks for developers.
- Experience in developing automated API test scripts with industry tools, including SoapUI or Postman.
- Perform above 30 Release testing, dynamic security testing and generate EOTR (End of testing report).
- Experience in using JIRA-X-ray, confluence, CI/CD tools and Agile / Scrum methodology for work.
- Experience in Mobile testing and Mobile automation framework as well IOS/ Android.
- Experience with designing, implementing, tailoring, and documenting automated test framework used on testing projects.
- Lead a team of 8+ members that restructured & rewrote regression test cases. Understand the platform importance in the enterprise and the value of a great user experience.
